

METER POINT DATA COLLECTION

WHAT IS METER POINT DATA COLLECTION?

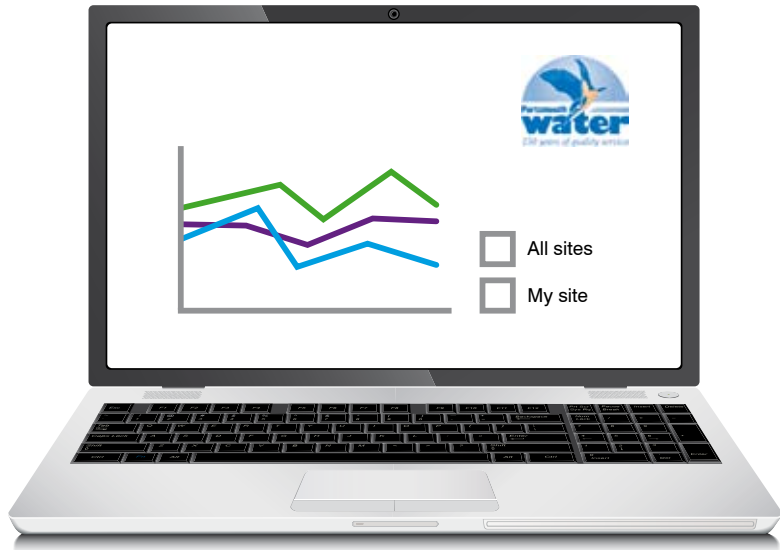

In short, our technology collects readings from your water meter every 15 minutes.

With this information we can analyse the data with you and identify areas where savings can be made.

WHAT ARE THE BENEFITS?

By understanding your legitimate water use a baseline can be established. We can work with you to reduce the excess use which in turn lowers your charges with both your water and wastewater account.

WHAT DO YOU GET?

Our service is based on an annual contract. We supply all of the equipment, install, commission and maintain throughout the period.

You pay for the equipment up front and then a small data transmission charge annually.

Typical charges per meter

Equipment & Installation	£345
Annual Data Charge	£54

Potential savings example

Water Charge	£1000
Waste Water Charge	£3000
Total Charges	£4000
Saving based on 10% consumption saving	£400

ONCE I HAVE REDUCED MY WATER USE, WHY DO I NEED TO CONTINUE TO MONITOR?

The equipment will be programmed to tell you via an email alert when things are not what they should be.

That could be a pipe broken underground, a tap left on in a remote building or room and an event that is happening when your business is closed over a holiday period.

HOW CAN I LEARN MORE ABOUT METER POINT DATA COLLECTION?

Call our Customer Service Team and they will arrange for someone to visit you and provide a free demonstration on your water meter.
