

Water

Specialist Educational Programmes

For 2005, in conjunction with Sir George Staunton Country Park, Portsmouth Water is pleased to offer a learning experience involving the world of water.

Areas covered in the experience include:

Planet Water

Why humans need water; why water is important to all forms of life

Water Cycle

Natures way of recycling the planets water

Sources of Water

Where does your drinking water come from?

Water Supply and Treatment

How do we ensure that the water you drink from the tap is safe? What are the processes used?

Water Distribution

It's always at the tap when you need it. How did it get there?

Water Quality

How can we be sure that your drinking water is safe?

Water Conservation

Why it is important to conserve our valuable water sources and what you can do to help!

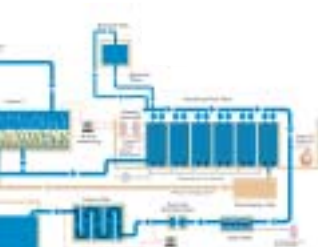

With the help of the park's education officer we can offer both guided and self-guided water related activities that are explicitly linked to the National Curriculum. These will ensure both an understanding of the importance water has on the planet and the water supply processes that ensure the water you drink is safe.

Delivered in the newly developed education centre situated in the Sir George Staunton Country Park the learning experience can be included as part of your visit to the park.

Contact the park for an education pack on **023 92453405**
