

# Our Water Resources Management Plan at a glance

## Our Mission

“ To supply drinking water of the highest quality combining high levels of customer service with excellent value for money ”

Portsmouth Water has enough water to supply you for the next 25 years. We will continue to promote a more sustainable future through the following commitments to you, our customers.

### » Protecting the Environment

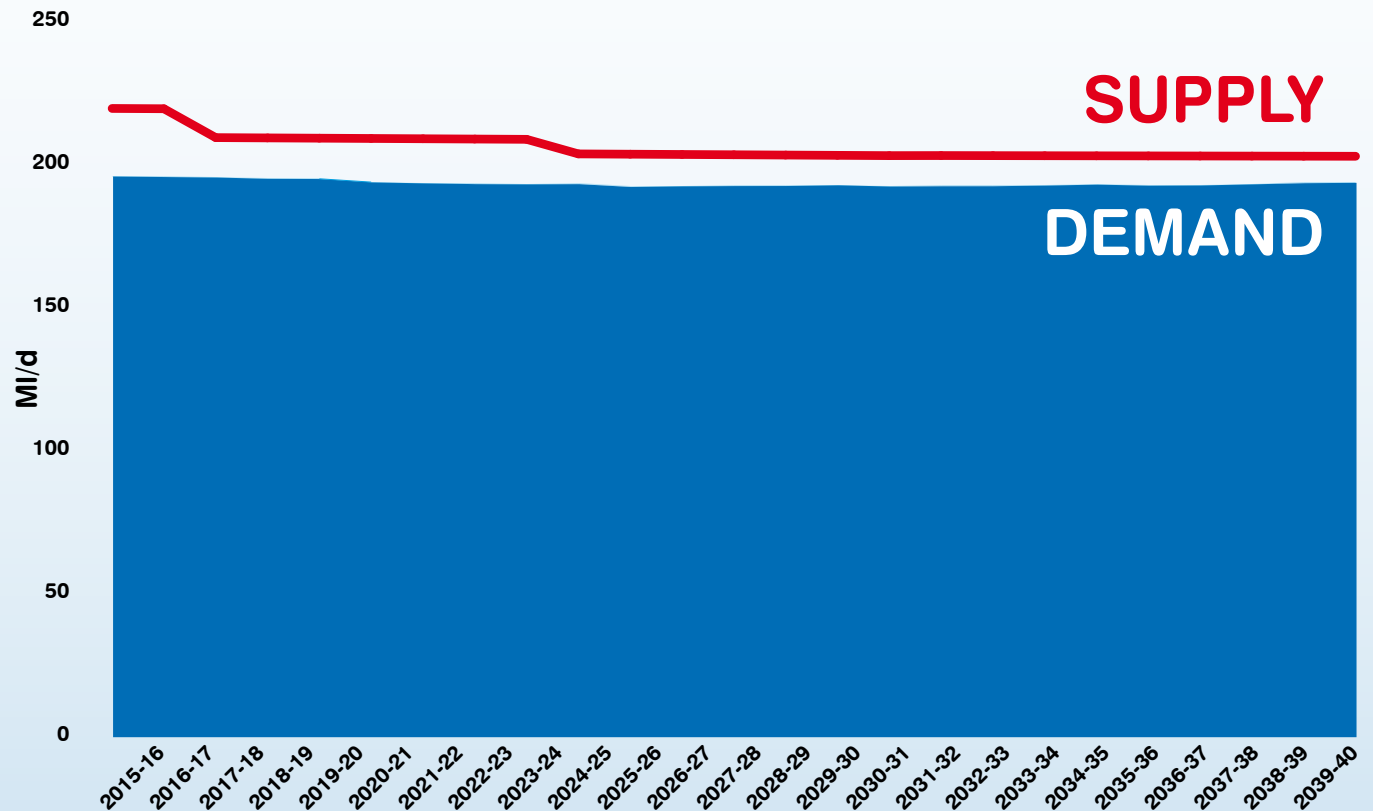

Through reducing the amount of water abstracted at three of our sources we will help to ensure that the environment is not adversely affected by our abstractions.

### » Falling Demand

Through further promotion of water efficiency and optional metering we will help you save water, both at home and at work. We are, however, not proposing compulsory metering in this plan.

### » Reducing Leakage

Through greater innovation in leakage management we will strive to reduce the amount of water lost through leaks in our pipes.
